Prahadeesh K (2019115066)

Sai Srinivasan V (2019115085)

Problem Statements:

To reduce the manual work in the banking sector a model needs to be designed to analyse whether an individual is fit enough to avail the loan or not. The main objective is to predict whether a new applicant can be granted the loan or not using models trained on the historical data set.

→ Develop a loan approval system that can predict loan approval based on expert data.

→ Automate the process of loan approval system using machine learning & deep learning

→ Develop a loan approval system that can provide a possible reason for rejection
